**FUEL CELL HAVING COOLANT OUTLET AND INLET BUFFERS ON A FIRST AND SECOND SIDE**

Examiner: K. Han    SN: 10/533,182    Art Unit: 1795    March 24, 2010

**Detailed Action**

1.     The Applicant's amendment filed on January 11, 2010 was received.
  
2.     The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

***Specification***

3.     The objection the specification has been withdrawn in view of the Applicant's amendment to the title.

***Claim Rejections - 35 USC § 103***

4.     The claim rejection under 35 U.S.C. 103(a) as unpatentable over Inoue et al. in view of Enjoji et al. and Voss et al. on claims 1-15 is withdrawn, because of Applicant's arguments and perfection of the foreign priority documents.

**REASONS FOR ALLOWANCE**

5.     The following is an examiner's statement of reasons for allowance: Claims 1-15 are allowed. The invention of independent claims 1 and 14 recites a fuel cell with a coolant flow field including two or more inlet buffers separate from each other, at least one inlet buffer disposed on a first side of a coolant supply passage and at least another

Art Unit: 1795

inlet buffer disposed on a second side of said coolant supply passage, two or more outlet buffers separate from each other connected to said coolant discharge passage, at least one inlet buffer disposed on a first side of said coolant discharge passage and at least another outlet buffer disposed on a second side of said coolant discharge passage, and straight flow grooves connected between said inlet buffers and said outlet buffers provided between a first and second metal plate. The closest prior art of record Inoue et al. does not teach the use of inlet and outlet buffers for any of the fluid passages. The invention of independent claim 9 recites a fuel cell with a coolant flow field which includes two or more inlet buffers separate from each other connected to said coolant supply passage through inlet connection passages, two or more outlet buffers separate from each other connected to said coolant discharge passage through outlet connection passages, and flow grooves connected between said two or more inlet buffers and said two or more outlet buffers. The closest prior art of record Inoue et al. does not teach the use of inlet and outlet buffers for any of the fluid passages.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
